

LCB TRAINING

THE MENTAL GAME WORKBOOK

Build Confidence On and Off the Field

Exercises, drills, and reflection prompts to strengthen your mindset and compete with confidence every game.

All Ages | Coach Broc Approved | Work Hard. Be Memorable.

A Note from Coach Broc

The mental game is where baseball is truly won and lost. You can have perfect mechanics and elite athleticism, but if your mind is not right — if you are afraid to fail, if one bad at-bat ruins your whole game, if you walk to the plate doubting yourself — none of that physical ability matters.

I created this workbook because I believe confidence is a skill. It is something you can train, develop, and improve just like your swing or your footwork. The exercises and questions in this workbook are designed to help you understand how your mind works, build genuine confidence, and develop the mental toughness to compete at your highest level every single time you step on the field.

Work through each section honestly. There are no wrong answers. The more you put in, the more you get out.

"Work Hard. Be Memorable."

Section 1 — Confidence & Self Belief

Confidence does not come from never failing. It comes from knowing you have put in the work and trusting yourself to compete. The most confident players are not the ones who never doubt

themselves — they are the ones who have learned to play through the doubt.

Exercise 1 — Your Evidence List

1. Grab a piece of paper or use the space below.
2. Write down 10 specific moments where you performed well on the field. Not general — specific. "I went 2 for 3 with a double in the playoff game." "I made a diving catch in left field."
3. Read this list before every game. Your brain needs evidence that you can perform. Give it the evidence.
4. Add to this list every time something good happens. Keep it growing.

1. What are 3 specific moments on the field where you performed at your best?

2. What did it feel like in those moments? What were you thinking about?

3. What do you do better than most players at your level? Be honest — this is not bragging, this is self-awareness.

4. What would you tell a teammate who was doubting themselves before a big game?

Exercise 2 — Your Confidence Anchor

1. Think of the single best moment you have ever had on a baseball field.

2. Close your eyes and replay it in as much detail as possible. The sights, sounds, how your body felt.
3. This is your Confidence Anchor. Before every at-bat or big moment, take one breath and briefly recall this memory.
4. It takes 3 seconds and it works. Your brain cannot tell the difference between a vivid memory and reality.

Section 2 — Dealing with Failure & Slumps

Every player goes through slumps. Every player fails. The best players in the world fail more than anyone because they compete more than anyone. A .300 hitter in the big leagues fails 70% of the time — and they get paid millions of dollars to do it. How you respond to failure defines your career.

The Truth About Slumps

- A slump is not a life sentence. It is temporary information.
- Do not change everything when things go wrong. Trust your training and make small adjustments.
- Separate your identity from your stats. You are not your batting average.
- The at-bat after your worst at-bat is always a new opportunity. Reset. Compete.

Exercise 3 — The 10 Second Rule

1. After a bad at-bat, a bad play, or a tough inning, you get exactly 10 seconds to be frustrated.
2. Feel it. Show it if you need to. Then let it go completely.
3. After 10 seconds, take one deep breath — in for 4 counts, out for 6 counts.
4. Say one reset phrase to yourself. Examples: "Next pitch." "Stay present." "I've got this."
5. Walk back to the dugout or take your position with your head up. The next play is all that matters.

1. Describe your last slump or tough stretch. What was going through your mind?

2. Looking back, what was one thing that was actually going right even during that tough stretch?

3. What is your personal reset phrase? Write it here and commit to using it.

4. Who is someone you admire who bounced back from failure? What did they do that you can copy?

Exercise 4 — Reframe the Failure

1. After a tough game or performance, write down what happened factually — not emotionally.
2. Then write one thing you learned from it.
3. Then write one specific thing you will work on because of it.
4. This turns every failure into a coaching moment instead of a confidence drain.

Section 3 — Pre-Game Focus & Routine

The best players in the world do not just show up and hope they feel ready. They create a routine that puts them in the right mental state before the first pitch. A pre-game routine eliminates guesswork, reduces nerves, and signals your brain that it is time to compete.

Exercise 5 — Build Your Pre-Game Routine

1. Your routine should start at least 60-90 minutes before first pitch.
2. It should include: physical warmup, mental warmup, and a focus cue.
3. Physical warmup: use the LCB Pre-Game Warmup Routine (15 minutes).
4. Mental warmup: read your Evidence List, recall your Confidence Anchor, visualize one great play.
5. Focus cue: one specific mechanical thought for today's game — just one, not five.
6. Write out your personal routine below and commit to it for every game.

1. What does your current pre-game routine look like? Be honest.

2. What is one thing you can add to your routine that would help your mindset before games?

3. Write your ideal pre-game routine step by step from arrival at the field to first pitch.

4. What is your one mechanical focus for your next game? Write it here.

Exercise 6 — Visualization

1. Find a quiet spot before the game. Close your eyes.
2. See yourself walking to the plate or taking your position feeling calm and confident.
3. Visualize making your first great play of the game in full detail — what you see, hear, and feel.
4. See yourself responding well to a tough moment — a strikeout, an error — and bouncing back immediately.
5. Open your eyes. You just gave your brain a mental rehearsal. It works.

Coach Broc Says

- Nerves are not the enemy. Nervousness means you care. Channel it into energy, not fear.
- Your routine should be something you can do anywhere — home games, away games, tournaments.
- The best pre-game mindset is simple: I am prepared, I trust my training, I am ready to compete.
- Do not talk yourself into pressure before the game. Stay process-focused, not outcome-focused.
- If you struggle with pre-game anxiety, submit a mental game support request at lcbtraining.com — Coach Broc will help you work through it personally.

Your Weekly Mental Game Check-In

Use these questions once a week — after a game, after practice, or on a rest day. Consistency with your mental training is just as important as your physical training.

This week I am most proud of:

Something I struggled with mentally this week and what I learned from it:

My confidence level this week on a scale of 1-10 and why:

One mental game goal I am setting for next week:
