

LCB TRAINING

PRE-GAME WARMUP ROUTINE

Baseball Performance Training

A complete 15-minute warmup routine to prepare your body and mind to compete at your highest level.

All Ages | 15 Minutes | Game Day Ready

Why Your Warmup Matters

Most players show up to the field and go straight to throwing or taking swings. That is one of the biggest mistakes you can make. A proper warmup does not just prevent injury — it activates the muscles you need, sharpens your focus, and puts your body in a state to perform at its best from the very first pitch. This 15-minute routine is Coach Broc's exact warmup protocol for baseball athletes at every level.

Phase 1 — General Activation (Minutes 1-4)

Start by elevating your heart rate and loosening up the entire body. These movements are low intensity but deliberate — wake up the muscles before you ask them to perform.

Exercise	Duration	Coaching Cue
Jog — outfield line and back	90 sec	Easy conversational pace, breathe through your nose, relax your shoulders
High Knees	20 sec	Drive knees to hip height, pump arms, stay on the balls of your feet

Butt Kicks	20 sec	Kick heels toward glutes, lean slightly forward, quick turnover
Lateral Shuffle	20 sec each way	Stay low, do not cross feet, push off the outside foot
Arm Circles	15 each direction	Start small and gradually increase the circle size, loosen the shoulder

Phase 2 — Dynamic Mobility (Minutes 4-8)

Now that the body is warm, open up the hips, thoracic spine, and shoulders — the three areas that matter most for baseball athletes. Move through each exercise with intention.

Exercise	Duration	Coaching Cue
Leg Swing — front to back	10 each leg	Hold fence or wall for balance, keep hips square, let the leg swing freely
Leg Swing — side to side	10 each leg	Control the swing at end range, do not let hips rotate with the leg
Hip Circle	10 each leg	Slow controlled circles, maximize range in both directions, stay balanced
World's Greatest Stretch	5 each side	Lunge forward, elbow to ground, rotate and reach to sky — slow and deliberate
Thoracic Rotation (hands behind head)	10 each side	Sit in squat position or stand, hands behind head, rotate fully, eyes follow
Inchworm	5 reps	Hands to ground, walk out to plank, walk back, stand — feel the hamstring stretch

Phase 3 — Throwing Warmup (Minutes 8-12)

Your arm needs to be properly warmed up before you throw at full effort. Never skip this step. Start short and easy, build to full distance progressively.

Exercise	Duration	Coaching Cue
Wrist Flicks	20 reps	Stand 10 feet apart, use only the wrist, loosen the forearm and fingers

Short toss — 30 feet	1 minute	Easy effort, focus on grip and release point, no arc on the ball
Medium toss — 60 feet	1 minute	Build to 60-70% effort, work on extension through the throw
Full toss — 90 feet	1 minute	80-90% effort, full arm path, good follow through, do not go max effort
Back to 60 feet	30 sec	Come back in, loosen up, shake out the arm between throws

Phase 4 — Swing & Mental Prep (Minutes 12-15)

The last three minutes are for locking in your mechanics and getting your mind right. This is where you go from warm to ready.

Exercise	Duration	Coaching Cue
PVC Pipe or Light Bat Swings	10 swings	Focus on hip load and rotation, feel the sequence, no rushing
Tee work or dry swings	10 swings	Pick one mechanical focus for today — do not try to fix everything at once
Visualization	60 sec	Close your eyes, see yourself getting a hit, feel confident and calm at the plate
Deep Breathing	5 breaths	In through nose for 4 counts, hold for 2, out through mouth for 6 — calm the nerves

Coach Broc's Tips

- Start this routine at least 20 minutes before first pitch to give yourself buffer time.
- The mental prep phase is just as important as the physical. Do not skip it.
- If you only have 10 minutes, prioritize Phase 2 (mobility) and Phase 3 (throwing) — never skip the arm warmup.
- Make this routine a habit. The best players are the most prepared players.
- Talk to yourself positively during the visualization. What you tell yourself before the game matters.
