# Stay Closed: Fix Your Front Shoulder

3-Week Fix-It Plan

# The problem

You want to hit the ball hard, so you try to rotate as much as you can. Your front shoulder flies open, your power leaks out toward the foul line, and you end up getting around the baseball: rollovers, weak pulled grounders, and pop-ups.

# The fix

Rotate as fast and hard as you can, but keep that front shoulder closed so your power and your balance stay over the plate. The key to every drill in this plan: keep your eyes and your chest behind contact.

# What fixed looks like

- You drive the ball with backspin to the opposite field.
- You consistently fall over the plate after you swing, not out toward the line.
- You stay inside the baseball longer.

# Drills

### Lead Arm Direction Progression

Let your lead arm dangle. Flow into your load in one motion, then come through hard, keeping your eyes and chest behind contact. No bat, no ball, or use a tee as a target.

Watch the video on your plan page: https://lcbtraining.com/fix-it/fixit-stay-closed

### Lead Arm Drill

Lead arm up and still, top hand on the bat. Hit off the tee and drive the ball up the middle without letting the lead arm fly open.

Watch the video on your plan page: https://lcbtraining.com/fix-it/fixit-stay-closed

### Low and Away Tee

Set the tee low and away. Drive the ball the other way while keeping your front shoulder on the baseball.

### Recoil Drill

Swing, then take a step over the plate. It forces your power and balance to stay over the plate instead of flying out toward the line.

# Baseline test

Day 1, and again on the last day: 10 swings off a low and away tee. Count how many are hard line drives up the middle or to the opposite field with backspin. Write it down. Film 3 swings from the side.

# Week 1: FEEL IT

Goal: feel the shoulder stay closed before you add a ball.
Day 1: Baseline test. Then Drill 1, 3 sets of 10 (slow, medium, game speed).
Days 2-5: Drill 1, 2 sets of 10. Drill 2, 3 sets of 8 off the tee. Drill 4 (dry, no ball), 2 sets of 8.
Checkpoint: After each swing, check your finish. Are you falling over the plate? Are your eyes and chest still behind

where contact was?

## Week 2: BUILD IT

Goal: hold it with a real swing and drive the ball the other way.
Days 1-5: Drill 1, 1 set of 10 to warm up. Drill 2, 2 sets of 8. Drill 3, 4 sets of 8. Drill 4 off the tee, 3 sets of 8.
Upgrade: If you have a partner, do one day of front toss with the recoil finish.
Checkpoint: Count your backspin line drives to the opposite field each day. The number should climb.

## Week 3: COMPETE WITH IT

Goal: take it to flips, BP, and games.
Days 1-4: Drill 1, 1 set of 10 to warm up. Drill 3, 2 sets of 8. Front toss or BP, mixed locations, 4 sets of 8, finishing every swing with the recoil step. Last round is a "two-strike round": drive everything middle or the other way. No partner? Mix tee heights and locations instead.
Day 5: Retest. 10 swings off the low and away tee. Compare to Day 1. Film 3 swings from the side and compare to Week 1.

## What's next

- Use your free swing analysis to have Coach Broc check your Week 3 swing.
- Want a plan built just for you? The 12-Week Program. Use code STARTER25 for $25 off.

5 hitting days a week, about 20-30 minutes, 1 rest day, 1 optional day. Works with just a tee; flips and BP are upgrades.
