Program Overview

Disclaimer

This program is designed for healthy individuals. Consult a physician before beginning any new exercise program. Stop immediately if you experience pain or discomfort. LCB Training is not responsible for any injuries sustained while following this program. Proper form always takes priority over weight or speed.

The LCB Mobility Program is a 12-week progressive routine designed specifically for baseball athletes. Mobility is the foundation of everything — you cannot generate power through ranges of motion you do not own. This program targets the hips, thoracic spine, shoulders, and ankles to unlock your full athletic potential.

What you will develop:

- Hip mobility for a longer, more powerful stride and rotation
- Thoracic spine rotation for better bat path and throwing mechanics
- Shoulder and lat flexibility to protect your arm and improve arm action
- Ankle mobility for better athletic stance and fielding positioning
- Active flexibility you can actually use in game situations

Program Structure

5 sessions per week, 20-30 minutes each. Can be done as a standalone session or before/after your strength training. The program progresses from passive stretching in weeks 1-4 to active and loaded mobility in weeks 9-12. This sample includes Week 1 — the foundation block.

Week 1 — Foundation Block

Focus: identifying restrictions and building baseline flexibility. Hold each stretch for the full duration. Never force a range — work to the point of tension, not pain.

Day 1 — Hips & Lower Body

Exercise	Sets x Duration	Type	Coaching Cue
90/90 Hip Stretch	2 x 60 sec each side	Passive hold	Sit tall, both legs at 90 degrees, lean gently over front shin
Pigeon Pose	2 x 60 sec each	Passive hold	Front shin parallel to mat, square hips, fold forward for depth
Couch Stretch	2 x 45 sec each	Passive hold	Rear knee on ground, drive hip forward, squeeze glute
World's Greatest Stretch	3 x 5 each	Active	Lunge, elbow to ground, rotate, reach to sky — slow and controlled
Hip Flexor March	2 x 10 each	Active	Standing, drive knee to chest, hold 2 sec at top, stay tall

Day 2 — Thoracic Spine & Shoulders

Exercise	Sets x Duration	Type	Coaching Cue
Thoracic Extension over Foam Roller	2 x 60 sec	Passive	Roller at mid-back, arms crossed, extend over slowly
Thread the Needle	2 x 8 each	Active	On all fours, thread arm under body, follow with eyes, rotate fully
Wall Slide	2 x 12	Active	Back flat on wall, slide arms up and down, maintain contact throughout
Doorway Chest Stretch	2 x 45 sec each	Passive	Arm at 90 degrees, lean through doorway, feel stretch across chest
Lat Stretch on Box	2 x 45 sec each	Passive	Elbow on box, sit back into hips, let lat lengthen

Day 3 — Full Body Flow

Exercise	Sets x Duration	Type	Coaching Cue
----------	-----------------	------	--------------

Cat-Cow	2 x 10	Active	Slow and controlled, maximize both flexion and extension
Deep Squat Hold	3 x 30 sec	Passive	Heels flat if possible, elbows push knees out, chest tall
Hip CARs (Controlled Articular Rotations)	2 x 5 each	Active	Slow full circle of hip, maximize range in every direction
Shoulder CARs	2 x 5 each	Active	Slow full circle of shoulder, keep core braced, move only the arm
Ankle Circles	2 x 10 each	Active	Seated, maximize range, trace as large a circle as possible
