Hit the Brakes: Stop Drifting, Stay Stacked

3-Week Fix-It Plan

What this plan fixes

Drifting in your load, losing stack at contact, and hitting the ball softer than you should

3 weeks | 5 days a week | 20-30 minutes | Tee or flips

Prepared by Coach Broc - LCB Training

The Problem

All your power is built in your load. When your hips drift toward the ball as you swing, you lose that power. Your hips drag, your barrel drags through the zone, and you hit the ball softer than you should.

The Fix

Think about stopping hard on the brakes. The harder you hit the brakes in a car, the harder it stops. The harder your body stops, the harder your barrel comes through. Turn behind your front foot and stay stacked at contact: head over back shoulder, back shoulder over back knee.

What Fixed Looks Like

- You're stacked at contact: head over back shoulder, back shoulder over back knee.
- You're driving the ball with authority, especially the other way.

The Drills

Watch every drill video on your plan page

https://www.lcbtraining.com/fix-it/fixit-hit-the-brakes

Flow Progression, Lead Arm Only

Lead arm direction only. Flow into it, then turn hard behind your front foot.

Video on your plan page

Flow Progression, Two Hands

Bat dangling down, flow into your stance in one motion. Load, then go. Turn behind the front foot.

Video on your plan page

Stationary Feet-Together Drill

Feet together. Load with your chest over your feet and over the plate. Only bring your front foot forward as you stride, leaving all your power on your back leg. Then swing and stay stacked.

Video on your plan page

Low and Away Tee

Drive the ball the other way with authority.

Video on your plan page

Baseline Test

Day 1, and again on the last day: Film 5 tee swings from the side. Pause each at contact. Are you stacked? Count how many of 10 tee swings are hard line drives.

	Day 1	Day 21
Hard line drives (out of 10)	____	____
Notes from video		

Week 1: FEEL IT

Goal: Feel the brakes and the turn behind the front foot.

Day(s)	Drill	Sets x Reps	Focus
Day 1	Baseline test, then Drill 1 - Flow Progression, Lead Arm Only	3 x 8	Turn behind the front foot
Days 2-5	Drill 1 - Flow Progression, Lead Arm Only	2 x 8	Feel the brakes
Days 2-5	Drill 2 - Flow Progression, Two Hands	3 x 8	Dry or off a tee
Days 2-5	Drill 3 - Stationary Feet-Together Drill (dry)	3 x 8	Hold finish 2 sec; check you're stacked

Checkpoint: Does your front side stop hard? Is your weight still back when you start to turn?

Week 2: BUILD IT

Goal: Keep the brakes on with a full swing.

Day(s)	Drill	Sets x Reps	Focus
Days 1-5	Drill 2 - Flow Progression, Two Hands	1 x 8	Warm-up
Days 1-5	Drill 3 - Stationary Feet-Together Drill	4 x 8	Off the tee
Days 1-5	Normal stance off the tee - "hit the brakes" every swing	3 x 8	Stay stacked through contact
Days 1-5	Drill 4 - Low and Away Tee	2 x 8	Drive the ball the other way with authority

Upgrade: If you have a partner, one day of front toss starting from the feet-together setup.

Checkpoint: Film one swing a day from the side and pause at contact. Stacked?

Week 3: COMPETE WITH IT

Goal: Take it to flips, BP, and games.

Day(s)	Drill	Sets x Reps	Focus
Days 1-4	Drill 2 - Flow Progression, Two Hands	1 x 8	Warm-up
Days 1-4	Front toss or BP - first round from feet-together setup	1 x 8	Brakes before full stance work
Days 1-4	Front toss or BP - normal stance, mixed locations	4 x 8	"Brakes" every swing; last round middle or other way
Days 1-4	No partner? Mixed tee heights and locations instead of toss/BP	4 x 8	Same "brakes" focus every swing
Day 5	Retest - baseline tee swings	10 swings	Film 5; count hard line drives; compare to Day 1

Checkpoint: Retest on Day 5: film 5 swings and count hard line drives out of 10. Compare to Day 1.
