Stay Closed: Fix Your Front Shoulder

3-Week Fix-It Plan

What this plan fixes

Front shoulder flying open, power leaking toward the foul line, and rollovers on the pull side

3 weeks | 5 days a week | 20-30 minutes | Tee or flips

Prepared by Coach Broc - LCB Training

The Problem

You want to hit the ball hard, so you try to rotate as much as you can. Your front shoulder flies open, your power leaks out toward the foul line, and you end up getting around the baseball: rollovers, weak pulled grounders, and pop-ups.

The Fix

Rotate as fast and hard as you can, but keep that front shoulder closed so your power and your balance stay over the plate. The key to every drill in this plan: keep your eyes and your chest behind contact.

What Fixed Looks Like

- You drive the ball with backspin to the opposite field.
- You consistently fall over the plate after you swing, not out toward the line.
- You stay inside the baseball longer.

The Drills

Watch every drill video on your plan page

Lead Arm Direction Progression

Let your lead arm dangle. Flow into your load in one motion, then come through hard, keeping your eyes and chest behind contact. No bat, no ball, or use a tee as a target.

Video on your plan page

Lead Arm Drill

Lead arm up and still, top hand on the bat. Hit off the tee and drive the ball up the middle without letting the lead arm fly open.

Video on your plan page

Low and Away Tee

Set the tee low and away. Drive the ball the other way while keeping your front shoulder on the baseball.

Video on your plan page

Recoil Drill

Swing, then take a step over the plate. It forces your power and balance to stay over the plate instead of flying out toward the line.

Written drill

Baseline Test

Day 1, and again on the last day: 10 swings off a low and away tee. Count how many are hard line drives up the middle or to the opposite field with backspin. Write it down. Film 3 swings from the side.

	Day 1	Day 21
Hard line drives (out of 10)	____	____
Notes from video		

Week 1: FEEL IT

Goal: Feel the shoulder stay closed before you add a ball.

Day(s)	Drill	Sets x Reps	Focus
Day 1	Baseline test, then Drill 1 - Lead Arm Direction Progression	3 x 10	Slow, medium, game speed
Days 2-5	Drill 1 - Lead Arm Direction Progression	2 x 10	Feel the shoulder stay closed
Days 2-5	Drill 2 - Lead Arm Drill	3 x 8	Off the tee
Days 2-5	Drill 4 - Recoil Drill (dry, no ball)	2 x 8	Power stays over the plate

Checkpoint: After each swing, check your finish. Are you falling over the plate? Are your eyes and chest still behind where contact was?

Week 2: BUILD IT

Goal: Hold it with a real swing and drive the ball the other way.

Day(s)	Drill	Sets x Reps	Focus
Days 1-5	Drill 1 - Lead Arm Direction Progression	1 x 10	Warm-up
Days 1-5	Drill 2 - Lead Arm Drill	2 x 8	Off the tee
Days 1-5	Drill 3 - Low and Away Tee	4 x 8	Drive the ball the other way
Days 1-5	Drill 4 - Recoil Drill	3 x 8	Off the tee, recoil finish

Upgrade: If you have a partner, do one day of front toss with the recoil finish.

Checkpoint: Count your backspin line drives to the opposite field each day. The number should climb.

Week 3: COMPETE WITH IT

Goal: Take it to flips, BP, and games.

Day(s)	Drill	Sets x Reps	Focus
Days 1-4	Drill 1 - Lead Arm Direction Progression	1 x 10	Warm-up
Days 1-4	Drill 3 - Low and Away Tee	2 x 8	Stay closed on the away pitch
Days 1-4	Front toss or BP (recoil finish every swing)	4 x 8	Mixed locations; last round is two-strike (middle or other way)
Days 1-4	No partner? Mixed tee heights and locations instead of toss/BP	4 x 8	Same recoil finish every swing
Day 5	Retest - baseline swings off low and away tee	10 swings	Compare to Day 1; film 3 swings from the side

Checkpoint: Retest on Day 5: 10 swings off the low and away tee. Compare to Day 1. Film 3 swings from the side and compare to Week 1.
