

SPEED & AGILITY

Ages 16–18

12-Week Progressive Program

LCB TRAINING

Coach Broc • Player Development Program

Program Overview

This program is designed for high school athletes ages 16 to 18 who want to develop elite-level speed and agility. At this stage, the goal is maximum velocity, explosive change of direction, and the kind of first-step quickness that separates good players from great ones. Every rep should be executed at game speed or faster.

Program Structure

Weeks 1–4 (Foundation): Sprint mechanics refinement, acceleration work, and baseline agility testing.

Weeks 5–8 (Build): Max velocity development, complex agility patterns, and reactive speed.

Weeks 9–12 (Performance): Game-speed application, max-effort timed testing, and competitive drills.

Train 3x per week on a field or track. Rest fully between max-effort reps — speed work done in fatigue trains bad habits. Quality over quantity every single session.

Exercise Glossary – Speed & Agility (Ages 16-18)

Quick form reminders for every exercise in this program, listed alphabetically for easy reference.

3-Cone L-Drill (timed): Set 3 cones in an L shape 5 yards apart, sprint to the first, back to start, around the outside of all 3 cones, and back through start as fast as possible.

5-10-5 Pro Agility (timed): Start in the middle of 3 cones 5 yards apart, sprint 5 yards and touch, 10 yards the opposite way and touch, 5 yards back through start.

A-Skips: Skip forward driving the knee sharply up to hip height, push off the toes powerfully, pump the opposite arm, alternate rhythmically.

Acceleration Sprint (3-point stance): Set up in a 3-point stance, explode forward on signal, drive forward aggressively for the distance given.

Ankling Drill: Walk forward with very quick, light toe-to-ball-to-toe contacts, ankle stiffness is the key, keep ground contact minimal.

B-Skips: Like A-Skips but actively claw the leg back down toward the ground before pushing off, reinforces the sprint cycle.

Banded Hip Drive Sprint: Attach a band around the hips to a fixed point behind you, drive forward against the resistance focusing on hip extension.

Box Drill (reactive): 4-cone box, coach calls a direction or color as athlete moves, athlete reacts and changes path mid-movement.

Flying 30: Build speed gradually over 20 yards then hit absolute maximum velocity for the final 30 yards.

Hurdle Hops (single-leg): Hop over low hurdles on one leg, land softly, minimize ground contact time, switch legs each set.

Mirror Drill (competitive): Face a partner, one leads with direction changes, the other mirrors reactively, compete to gain or maintain position.

Overspeed Sprint (band-assisted): Attach a light band to the waist with a partner providing light forward pull, run faster than normal top speed.

Power Skip: Exaggerate the A-Skip with maximum height and distance on every step, drive the knee as high as possible.

Reactive Cone Sprint: Multiple cones in various directions, coach calls a cone number or color and athlete sprints to it as fast as possible.

Resisted Sprint: Resistance band attached to the waist with a partner holding the other end, sprint hard against the resistance.

Sled Push (if available): Low athletic stance, drive the sled forward with short powerful steps, lean into the sled, drive through the balls of the feet.

Wall Drill (double-leg): Both hands on a wall, drive both knees up alternately in a quick rhythm, practice the sprint cycle mechanics.
