Ages 12–15

12-Week Progressive Program

LCB TRAINING

Coach Broc • Player Development Program

Program Overview

This 12-week program is built for athletes ages 12 to 15 who are ready to train with more structure and intensity. At this age we introduce more challenging bodyweight progressions, light external load, and compound movements that build real athletic strength. The goal is not to look like a bodybuilder — it's to become a more explosive, durable baseball player.

Program Structure

Weeks 1–4 (Foundation): Establishing movement quality with compound bodyweight exercises and core stability work.

Weeks 5–8 (Build): Introducing light dumbbells or resistance bands, increasing sets and volume.

Weeks 9–12 (Strength): Progressive overload with increased load and intensity while maintaining technical precision.

Train 3x per week with at least one rest day between sessions. Sessions take approximately 35–45 minutes. Always complete the warm-up and never skip rest periods.

Exercise Glossary – Strength (Ages 12-15)

Quick form reminders for every exercise in this program, listed alphabetically for easy reference.

Box Jump: Stand in front of a sturdy box, drop into a quarter squat and explode up, land softly on both feet with knees slightly bent.

Bulgarian Split Squat: Rear foot elevated on a bench, front foot out far enough so front knee stays over the ankle at the bottom, lower until back knee nearly touches the ground.

Dumbbell Romanian Deadlift: Hinge at the hips with a slight knee bend, lower dumbbells along the shins until you feel a hamstring stretch, drive hips forward to stand.

Dumbbell Row (single-arm): Brace one knee and hand on a bench, pull the dumbbell toward the hip keeping the elbow close to the body and shoulder stable.

Goblet Squat: Hold a dumbbell vertically at chest height, squat down keeping chest tall and elbows inside the knees.

High Knee Skips: Skip forward driving knee up to hip height each step, stay light on the toes with a quick, powerful push-off.

Lateral Bound: Jump sideways off one leg, land softly on the opposite leg, stick the landing before bounding back.

Mountain Climbers: In a push-up position, drive knees toward chest alternating quickly, keep hips level and core braced.

Nordic Hamstring Curl: Kneel with ankles anchored, slowly lower your body toward the ground resisting with the hamstrings, catch yourself with hands and push back up.

Plank Reach: From a plank position, reach one arm straight forward without letting hips rotate or sag.

Push-Up (weighted optional): Hands under shoulders, body straight, lower chest to the ground and push back up; add a weight plate on the back when bodyweight becomes easy.

Reverse Lunge: Step one foot backward, lower until both knees are near 90 degrees, front knee stays over the ankle, push through the front heel to return.

Romanian Deadlift (DB): Same as DB Romanian Deadlift above — hinge and push hips back, feel the hamstring load, drive through the hips to stand tall.

Side Plank with Hip Dip: In a side plank, lower the hip toward the ground then raise it back up, keep the body in a straight line.

Single-Leg Romanian Deadlift: Balance on one leg, hinge forward reaching the opposite hand toward the ground while the free leg extends behind, keep the back flat.

Skater Jumps: Jump laterally from one foot to the other, reaching the opposite hand toward the landing foot, stay low and athletic.

Squat Jump: Squat down to parallel then explosively jump as high as possible, land softly and immediately go into the next rep.

Tricep Dip (chair/bench): Hands on edge of a bench behind you, lower body by bending elbows to 90 degrees then push back up.

Walking Lunge: Step forward into a lunge, push off the back foot to step into the next lunge, alternate legs, keep torso upright.
